

Make your own amazing frog

1. Cut carefully around the dark green lines.
2. Fold on dotted lines. Note that the tabs on the head fold **upwards**.
3. Glue all pink tabs to their appropriate sides. The frog's head is the hardest bit: it should bend in three places and be **concave** when finished. (ie. the top part of the head should fold towards you). This is NOT the most obvious way to fold it, it may look strange at first but that is why the illusion works.
4. Place your frog on a horizontal surface, close one eye and stare into his eyes from at least two feet away, until his face appears to be **convex**.
5. Move from side to side and prepare to be amazed.
